

REPORTING OF HAZARDS

The Hazard Communication Standard (HCS), established by PERRP, requires that the hazards of all chemicals, produced or imported, be evaluated and information concerning their hazards, if any, be transmitted to employees who may be exposed to those chemicals under normal operating conditions or in foreseeable emergencies. This Hazard Communication Program Policy Statement has been prepared to assist the District in complying with the Hazard Communication Standard.

The Hazard Communication Program will provide employees with the means to understand the nature of any chemical hazard to which they may be exposed during the course of employment so that they will be able to better protect themselves. The purpose of the program is to improve employee protection from chemical hazard and thereby reduce illness and injury caused by exposure to chemicals.

The program includes identifying and listing all hazardous chemicals present in the workplace, labeling all containers of hazardous chemicals in the workplace, obtaining and maintaining Safety Data Sheets, providing information about hazardous chemicals in the workplace and training employees regarding hazards of chemicals present in the workplace and the use of appropriate protective measures.

Any additional requirements under State and Federal laws are incorporated into the District Hazard Communication Program.

This statement of Hilliard School's Hazard Communication Program shall be maintained at the Business Office. This program shall be available for inspection, upon request, to all employees and their designated representatives.

Liability Disclaimer

Nothing in this policy should be construed in any way as an assumption of liability by the Board for any death, injury or illness that is the consequence of an accident or equipment failure or negligent or deliberate act beyond the control of the Board or its officers and employees.
